

Ishini Shavindhya

Place of birth: Colombo, Sri Lanka | **Nationality:** Sri Lankan | **Gender:** Female | **Phone number:** (+94) 0704472832 (Mobile) | **Email address:** ishinishavindhya@gmail.com | **Website:** ishini-portfolio-indol.vercel.app |

Address: No 7/3A,Indivitiya Road, Weligampitiya, 11350, Ja-ela, Sri Lanka (Home)

ABOUT ME

BSc (Hons) in Information Technology graduate specializing in Software Engineering, with internship experience building production-level full-stack systems and APIs. Hands-on with Linux, Docker, Kubernetes, Jenkins CI/CD, Terraform, AWS, Prometheus, and Grafana, with knowledge of JavaScript/TypeScript, Python, and Git workflows.

SKILLS

Technical Expertise

Linux | CI/CD | SQL | AWS | Microsoft SQL Server | Python | Bash (shell scripting) | JavaScript | Grafana | REST API design | Containerization | Nginx | Infrastructure as Code | Computer networking | Terraform | Docker | Kubernetes | Jenkins | Prometheus

Tools

Git | GitHub | Visual Studio Visual Studio Code

WORK EXPERIENCE

SOFTWARE ENGINEER INTERN (REMOTE) – OXZON AI – 23/06/2025 – 23/12/2025 – JAFFNA, SRI LANKA

- Contributed to three production-level systems: AutoParts POS System, WeddingHub Site Builder, and iFolioo Portfolio App.
- Designed REST APIs using ASP.NET Core and integrated SQL Server, implementing role-based billing with JWT authentication and PDF invoice generation.
- Built full-stack features using NestJS and Next.js, including user registration, template editing, and data management.
- Developed responsive user interfaces with Tailwind CSS and connected backends through SQL, LINQ, and JWT-protected endpoints.
- Collaborated using Git, submitted pull requests, and followed Agile practices including daily updates and task tracking.

PROJECTS

08/2026 – 09/2026

END-TO-END CI/CD PIPELINE ON AWS

- Built a multi-server CI/CD architecture on AWS EC2, separating Jenkins CI/CD workloads from the application deployment environment.
- Automated testing, Docker builds, Docker Hub publishing, SSH-based deployment, and health verification using Jenkins Pipeline as Code.
- Integrated GitHub Webhooks to trigger deployments automatically on code pushes and used build-number-based Docker image versioning.
- Deployed a React/Node.js application with Docker Compose, Nginx reverse proxying, and internal Docker networking.
- **Tech Used:** AWS EC2, Jenkins, Docker, Docker Compose, Docker Hub, GitHub, Linux, Nginx, SSH, React, Node.js, Jest

09/2026 – 09/2026

AWS INFRASTRUCTURE AUTOMATION WITH TERRAFORM

- Provisioned a VPC, public subnet, Internet Gateway, route table, Security Group, EC2 instance, and S3 bucket using Terraform Infrastructure as Code.
- Designed reusable networking and S3 modules with variables and outputs; used a data source to retrieve the latest Amazon Linux 2023 AMI.
- Implemented remote state in Amazon S3 with versioning, server-side encryption, public-access protection, and state locking, using a separate bootstrap configuration.
- Used Git for version control and excluded state files and local variables from the repository; validated changes with terraform validate, plan, and apply.
- **Tech Used:** Terraform, AWS (VPC, EC2, S3), Git

10/2026 – 10/2026

MONITORING & LOGGING STACK FOR A SAMPLE APP

- Containerized a Flask application with Docker and deployed it to a Minikube Kubernetes cluster using Deployments and Services.
- Configured Prometheus metrics collection and used PromQL to monitor request rates, HTTP 500 errors, and response duration.
- Created Grafana dashboards for traffic, error rates, response times, and endpoint-level request counts.
- Implemented and tested a Prometheus alert rule for sustained HTTP 500 error rates; practiced Kubernetes health checks and pod-recovery troubleshooting.
- **Tech Used:** Python (Flask), Docker, Kubernetes (Minikube), Prometheus, Grafana, PromQL

04/2026 – 04/2026

UNIFIED PET CARE ECOSYSTEM - AI DRIVEN PET NUTRITION SYSTEM

- Developed an AI-driven diet recommendation system generating personalized meal plans for cats and dogs using machine learning.
- Evaluated CatBoost, Random Forest, XGBoost, and LightGBM; selected CatBoost for best accuracy and native categorical handling.
- Built multi-output regression predicting protein, carbs, fat, calories, and meal frequency from pet profile data.
- Designed microservice architecture (Mobile UI -> FastAPI -> CatBoost ML -> diet engine) with food safety alerts.
- Dataset and outputs validated by licensed veterinary professionals for clinical accuracy.
- **Tech Used:** Python, CatBoost, FastAPI, Machine Learning, Flutter, REST APIs

04/2025 – 04/2025

PERSONAL FINANCE TRACKER SYSTEM - RESTFUL API

- Built a secure RESTful API with JWT auth, role-based access, budget tracking, recurring transactions, and multi-currency support.
- Personalized dashboards with real-time alerts for budget limits and spending trends.
- **Tech Used:** Node.js, Express.js, MongoDB, JWT

EDUCATION AND TRAINING

10/2022 – 06/2026 Malabe, Sri Lanka

BACHELOR OF SCIENCE HONOURS IN INFORMATION TECHNOLOGY SPECIALIZED IN SOFTWARE ENGINEERING SLIIT
